

Harmil Goti

Frontend Developer | React, Next.js, TypeScript | Building Scalable & Real-Time Web Apps

✉ harmilgoti0@gmail.com | 📞 6353130219

English | Gujarati | Hindi

Frontend Web Developer with 4 years of professional experience in React.js and Next.js, specializing in building scalable, SEO-optimized, and high-performance web applications with a focus on Core Web Vitals. Expertise in bridging the gap between technical SEO and frontend architecture, creating real-time applications that are as fast as they are functional. Excellent communication skills with proven experience collaborating in remote and cross-functional teams. Seeking remote opportunities to contribute to scalable and impactful digital products while continuously enhancing user experience and product quality.

Key Skills

- **Technologies:** React.js, Next.js, JavaScript (ES6+), TypeScript, Node.js, MongoDB, Express.js, React Native
- **UI & Styling:** HTML5, CSS3, Ant Design, Tailwind CSS (v4), LESS, Material UI, Chakra UI, Framer Motion
- **State Management:** Redux Toolkit, Zustand
- **Real-Time & APIs:** WebSockets, Browser APIs, Performance-first API Integration
- **Tools & Workflow:** Git, GitHub, Agile/Scrum, Code reviews, Architecture ownership
- **Core Strengths:** Problem Solving, Responsive Design, Performance Optimization, SEO & Core Web Vitals
- **Remote Collaboration:** Async communication, clean documentation, Git-based workflows

Professional Experience

Frontend Developer | Dignizant Technologies LLP | Aug 2022 – Jan 2026

- Engineered scalable web apps using React, Next.js, and TypeScript, prioritizing high performance and code maintainability.
- Led frontend delivery for international clients (e.g., Sweden-based firms), ensuring alignment with global technical standards.
- Architected modular UI systems with Tailwind CSS, streamlining development cycles through reusable component libraries.
- Boosted search visibility by optimizing Core Web Vitals and technical SEO, significantly improving user retention.
- Collaborated in Agile teams to transform complex requirements into responsive, user-centric digital experiences.

Project Experience

Rukkorverse – Collaborative Workspace Platform (74 PR)

- Contributed to the development of a collaboration platform inspired by Slack and Infinity Workspace
- Implemented real-time communication using WebSockets while handling API requests via REST architecture
- Built modular UI systems using React.js, Redux Toolkit, and Ant Design
- Integrated AI assistant (Rukkor AI) powered by Mistral AI models and audio/video call, group meetings using LiveKit (custom)
- Developed features including channel-based communication, document storage, and multi-view boards (table, board, calendar)
- Implemented internationalization (i18n) supporting 10+ languages, enabling seamless localization and improved user experience for global audiences

Geomtra – Construction Estimation Platform (134 PR)

- Led the frontend redesign of the entire application, improving UI consistency, usability, and Lighthouse performance
- Built a custom template system allowing users to create reusable presets for measurement tools and estimation workflows
- Developed a template management interface where users can assign templates to different projects
- Implemented template deletion and restore functionality to improve data safety and user control
- Reduced search and filter latency by over 50% for datasets with 4,000+ annotations by optimizing state logic with useMemo and useCallback.
- Improved overall user experience for a platform used by 8000+ construction professionals

Additional Projects & Contributions

- USP.ai - AI Image Generation Platform
- Frank Porter – Frontend feature development and UI enhancements for Arabic language
- Yoga Studio Platform – Responsive UI components and page structure using Chakra UI
- Ozzo – Implemented dark mode and geolocation features to recommend nearby restaurants based on user location
- Insurance Platform – Dashboard and workflow UI improvements
- Dignizant Website – Frontend development and UI updates
- Deque Project – Authentication and navigation system development and accessibility improvements

Personal Projects

TailwindThemeMaker – Generates design variables for android | ios | web (100+ PR)

- Built a web app that helps developers create Tailwind CSS v4 themes and design systems with live preview and instant code export
- Added support for semantic tokens, dark mode themes, reusable CSS variables, and Figma token JSON export
- Created tools for typography, shadows, config-converter, animations, and other modern UI styles to speed up frontend development using tailwind CSS
- Optimized to achieve a 100 Lighthouse SEO score and 91% Performance by implementing Semantic HTML, JSON-LD Schema, and Static Site Generation (SSG).
- Developed AI features to generate themes from prompts, brand colors, Image url, logos, and screenshots

React Native

Light the Lamp: Puzzle Game

- Explored and developed a production-ready mobile game using React Native, Expo, and JavaScript/TypeScript.
- Built reusable and interactive UI components with React Native and React Native Skia for custom game rendering.
- Implemented state management, local data persistence, animations, audio, haptics, and responsive layouts for smooth gameplay.
- Integrated AdMob and analytics while optimizing performance, memory usage, and rendering across Android devices.
- Managed Android builds, testing, releases, and production deployment using Expo EAS and Google Play Console.

Word Search Legends

- Built a production-ready word search puzzle game using React Native and Expo, expanding my experience in mobile application development.
- Designed reusable and interactive game components, applying React.js knowledge to mobile UI and touch-based interactions.
- Explored game mechanics, procedural level generation, and difficulty progression, combining programming concepts with creative problem-solving.
- Implemented state management, local persistence, animations, audio, haptics, and analytics, gaining practical experience with mobile-specific technologies.
- Optimized performance and handled Android testing, builds, and production deployment, gaining hands-on experience in taking a React Native application from development to production.

Fill the Box: Line Connect

- Architected and shipped a production-grade React Native + Expo puzzle platform combining 3 gameplay engines — Number Flow, Line Connect, and Shape Fit - into a scalable application.
- Designed reusable game systems with automated level progression and generation, supporting infinite levels with increasing grid sizes, difficulty, sectors, stars, and progression states.
- Engineered responsive touch interactions for path drawing, path rewinding, number connections, block dragging, and shape rotation, with optimized rendering, animations, and haptic feedback.
- Built an offline-first architecture with local persistence for gameplay state, progression, daily challenges, streaks, and player data.
- Optimized rendering and state updates for smooth, consistent performance across Android devices, minimizing unnecessary React re-renders and improving interaction responsiveness.
- Implemented production systems including remote configuration, analytics, notifications, AdMob monetization, rewarded hints, and controlled ad frequency.
- Managed the complete Android release lifecycle, including regression testing, build configuration, Play Console releases, production monitoring, crash analysis, and post-release improvements.

Education

Bachelor of Commerce (B.Com)

Veer Narmad South Gujarat University — Surat, Gujarat

2018 – 2021
